

## WANTED

### PARTNERS WITH EXPERTISE AND INTEREST IN GLOBAL B2C, C2C AND M2M MARKETS

## GWW

The Global Wide Web is a disruptive technology different from WWW. It will not kill WWW-based companies such as Facebook, Instagram, Blogger, PowerPoint, Flickr, Pinterest, Picasa, Picsearch, iPhoto and Google but it will give them a tough competition. As the technology is completely different, the benefit will be somewhat different.

We are not starting from scratch. After four months we will have a prototype for authentication on the Internet ready. Then we are already in global expansion and we will reach the entire market from our office. Half a year later, we should be self-financing.

Do not tell WWW-professors about this. Many of them are in a different paradigm and trend of evolution, they feel safe and satisfied with their B2B environment. GWW will not make them happy.
